

Discussion Question(s) - Module 10

What are (name) two physiological factors that directly¹ affect left ventricular afterload; explain/discuss the effect(s) (on left ventricular afterload) of each factor. For each of these two direct factors name one (other) factor that affects the direct factor, either directly (on the direct factor) or through intermediates. Please **post your response by 9:00 PM on Day 4 of the module.**

¹ "Directly" means that the factor itself affects LV afterload; it does not act through one or more intermediates to affect LV afterload.

Rev 0, 4/4/17 - adapted from Fall 2016

Rev 1, 10/20/17 - modify language to focus on LV. Add request for secondary, tertiary, etc. factors

Rev 2, 7/13/18 - From Spring 2018, up-dated for 601; the question has been re-written for clarification

Rev 3, 10/28/19 - Update time due from 6:00 to 9:00 PM
